## Maintenance Procedure

1.01

### Powder Coated Metal Lockers

Hadrian lockers, featuring durable, double-pan, honeycomb filled doors with continuous piano hinges and a powder coated finish are of the highest quality available. To ensure optimum performance, durability and longevity, the following periodic maintenance is recommended.

1. Tighten any screws that have become loose due to vibrational forces or attempted vandalism.
2. Clean surfaces showing soil, grease, marks, etc. with warm water and a mild detergent (i.e.: Ivory Soap, Windex, Fantastic, etc.) followed by rinsing. Removing the excess moisture will renew the clean, even surface providing a pleasant sanitary appearance. Use of cleaners containing abrasives such as household cleaning powder, steel wool and harsh detergents, solvents or acids are not recommended.
3. Check surfaces for scratches and nicks. If these abrasions are deep and base metal is exposed, sand the area smooth. Paint the prepared area with air dry, touch-up enamel.
4. Lubricate the hinge (and positive single-point latch if applicable) periodically with a light grade (#10) machine oil. Operate door several times and wipe away excess oil.
5. Wax finished surfaces for added gloss and protection. Apply a coat of liquid or paste wax and rub to a glossy finish.
